EXPERIENCE

Unity Technologies Japan / Senior Software Engineer (IC7)

DEC 2020 - PRESENT, REMOTE

TS (+JS), React, Node, C#, GCP, Terraform

The world's leading platform for creating and operating interactive, real-time 3D content.

Hired as full stack engineer, made a lateral move to engineering manager, now back to an IC on the core web platform team.

- As a tech lead on the core web platform team for cloud.unity.com, build core features and steer technical direction for teams of internal developers building services on our platform. Most recently, shipped a 6-month project that introduced incremental TypeScript builds across local & CI (w/project references) and reduced build times by ~90%.
- Designed the architecture for a business-critical billing flow and delivered the frontend myself ahead of schedule.
- As engineering manager, drove a long-term localization R&D project through initial stages of the product pipeline. Identified hypotheses, validated with user tests, and brought together stakeholders from all over the business, all the while delivering the engine-side package prototypes myself. Resulted in CTO buy-in and a potential first-mover product with features powered by Azure OpenAI service.

Medmain / Software Engineer (Backend)

OCT 2019 - DEC 2020, REMOTE

Kotlin, SQL, ELK, AWS, Docker, Terraform

Series A medical AI startup aiming to be the global provider for digital pathology.

Took a medical AI product for confirming cancer diagnoses from prototype to production usage in Japanese hospitals.

- Containerized all services, set up CI, distributed logging, horizontal autoscaling of tasks with ECS. Reduced infrastructure costs.
- Introduced Terraform, enabled our team to deploy cost-effective feature branches.
- Advocated consistently for a strong testing culture. Built a test-containers suite for end-to-end backend testing. Developed a load testing system for our most crucial customer flow.
- Migrated a custom authentication system to an off-the-shelf multi-tenant Auth0 implementation.

Improbable / Software Engineer > Technical Lead > Technical Product Manager

JUN 2015 - APR 2019, LONDON

Unity, Unreal, Scala, GCP

Improbable develops SpatialOS, a platform that makes it possible to run massive-scale simulations for games, research, and government. Raised \$604M to date from SoftBank Vision Fund & others.

I joined just after their first Series A at ~30 people. Worked closely with the leadership and product teams as the company grew to over 300 employees.

- Focused on scalability and distributed systems. Led the effort towards the first successful 1000 player 24-hour soak test of a game world the size of Wales.
 - Became the Technical Lead of the Application Development team, which owned the user-facing SDK for SpatialOS. Shipped libraries used in production games.
 - Alongside the CEO, pitched and led onsite tech demos of SpatialOS.
-

-
- Created full-stack tooling and filled product gaps quickly for our early-stage customers. Worked directly with our client's engineering and leadership teams to ensure their games were successful.

Shazam / Junior Software Engineer

NOV 2013 - MAY 2015, LONDON

Developed Shazam for Android, a top 10 app with ~100m MAUs. Worked directly with the Server and iOS teams to ship cross-platform features, including the first release of the signup flow, newsfeed, Spotify integration, and visual recognition.

EDUCATION

University College London / BSc. Computer Science

2010 - 2014, LONDON

First Class Honours (~3.8 GPA equivalent).

OTHER

Third Nerve / Founded a games studio, built our own editor with XNA, got greenlit by community members on Steam.

Code in Place / Section leader for a cohort of 10 students in April 2021.

Japanese / Somewhere between JLPT N3-N2.
